

Connecting to your hotspot (or wifi)

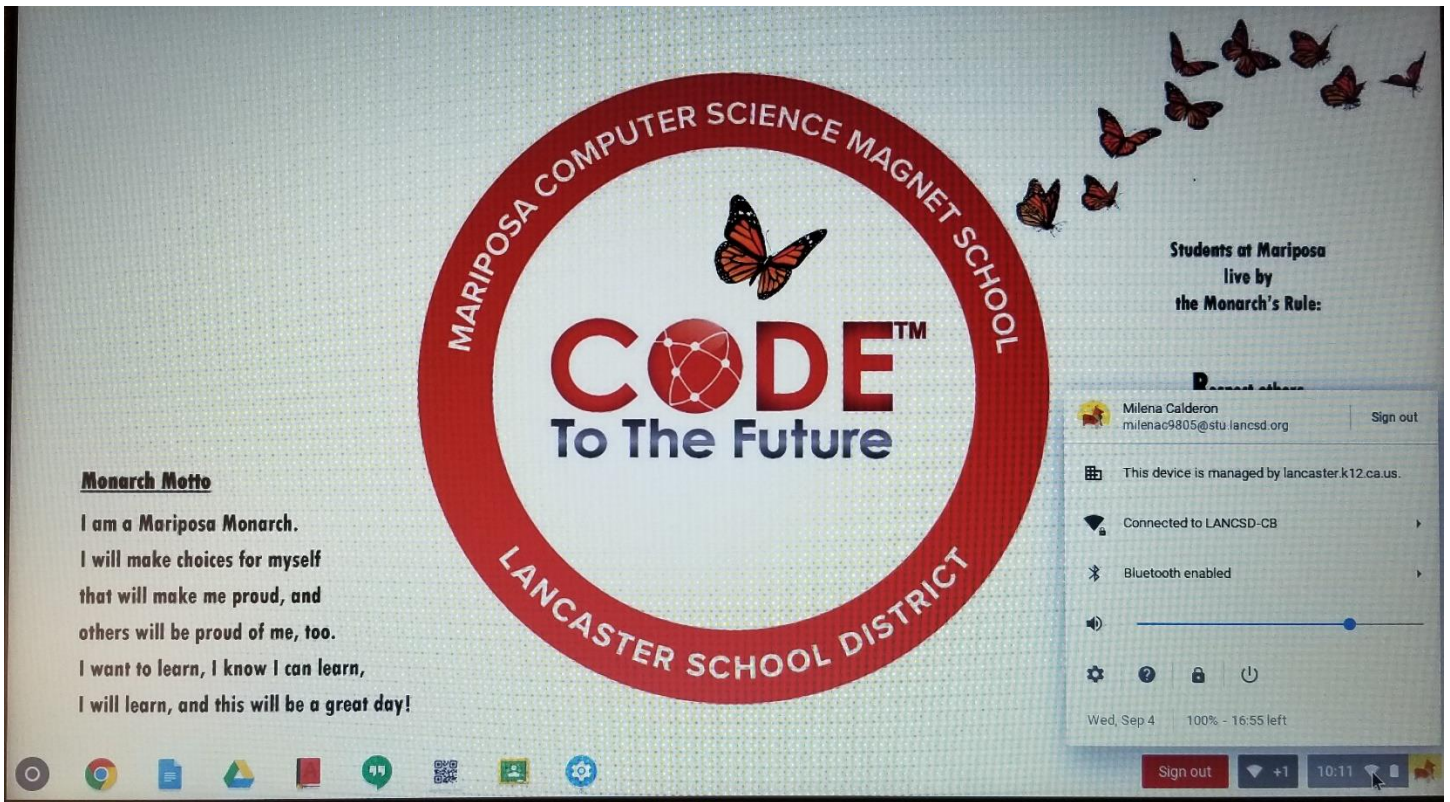

Make sure your hotspot is on, by pressing and holding the power button till the indicator lights turn blue.

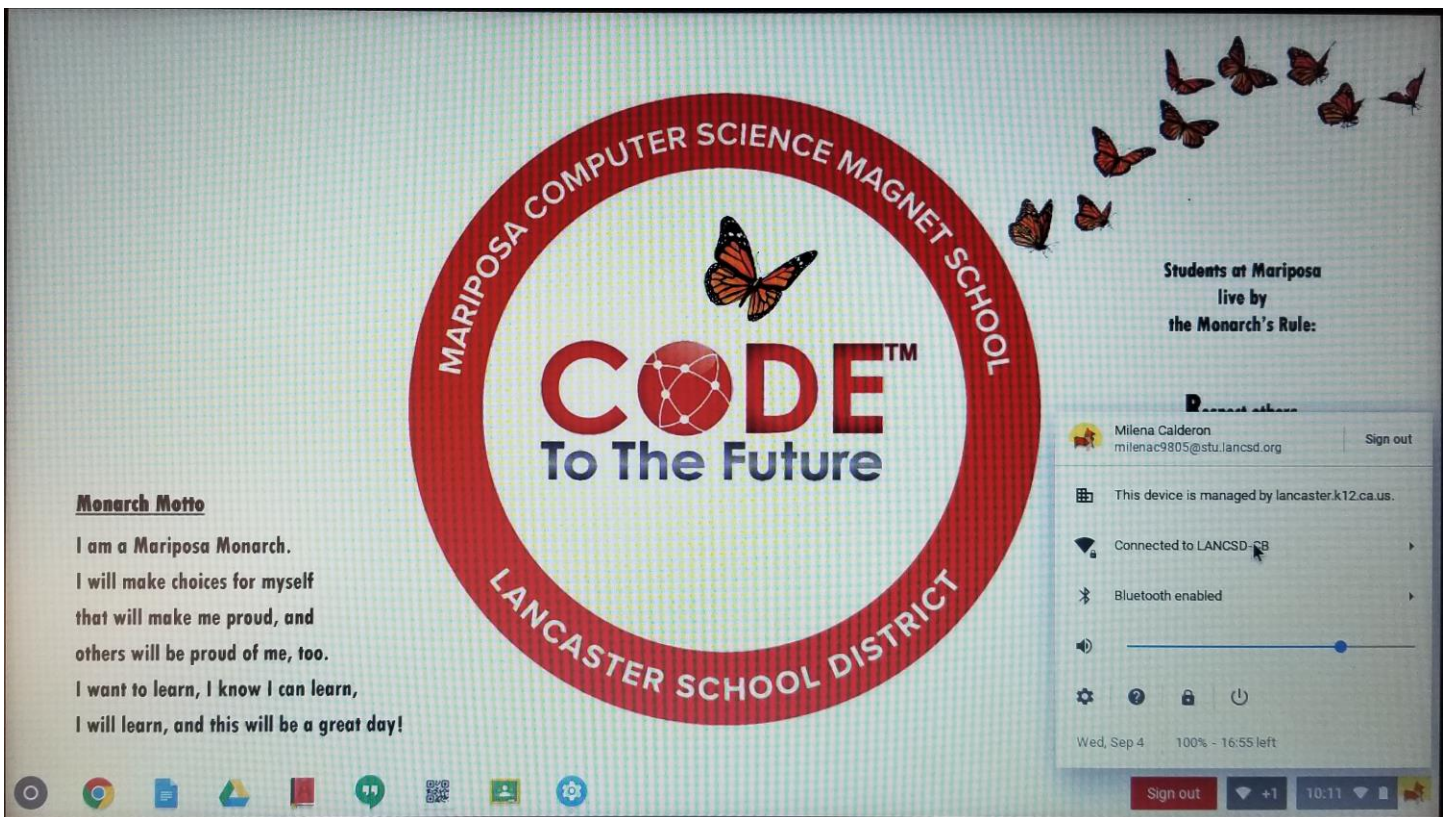

Next you will need the SSID and PWD from the back of the hotspot.

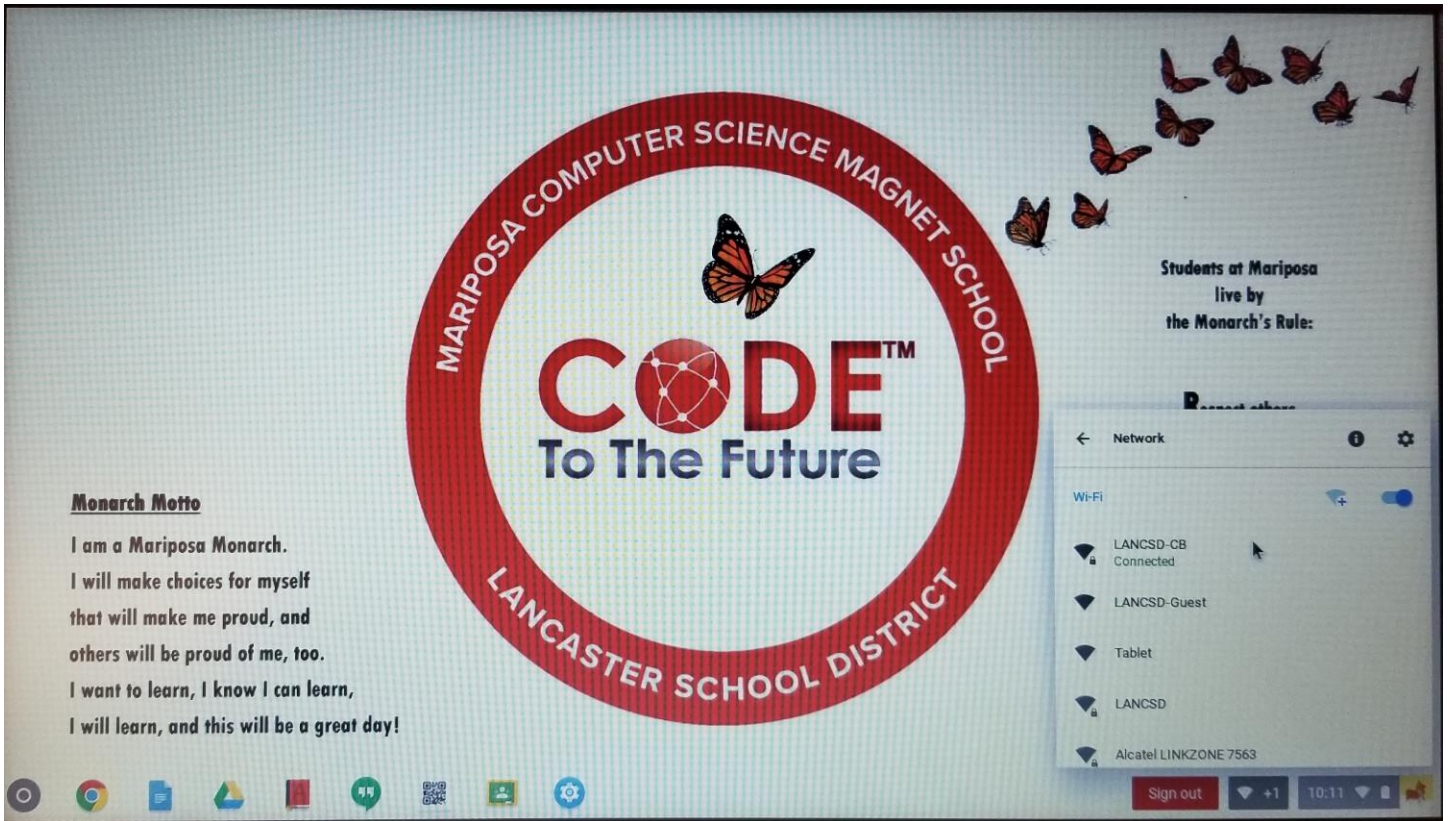

On the chromebook, click on the time at the lower right of the screen, a summary window will appear.

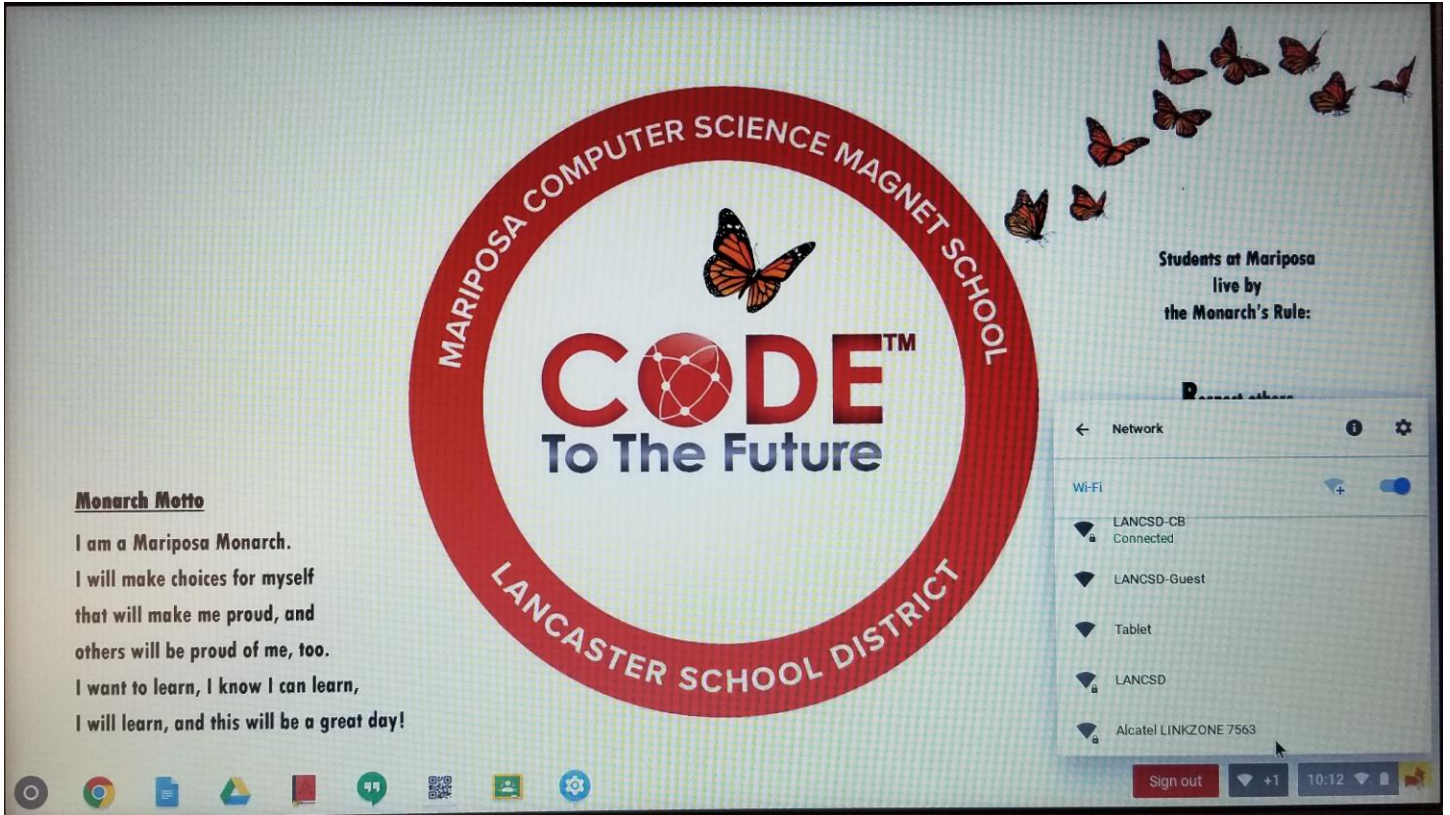

Click on the arrow to the right of the network/wifi icon.

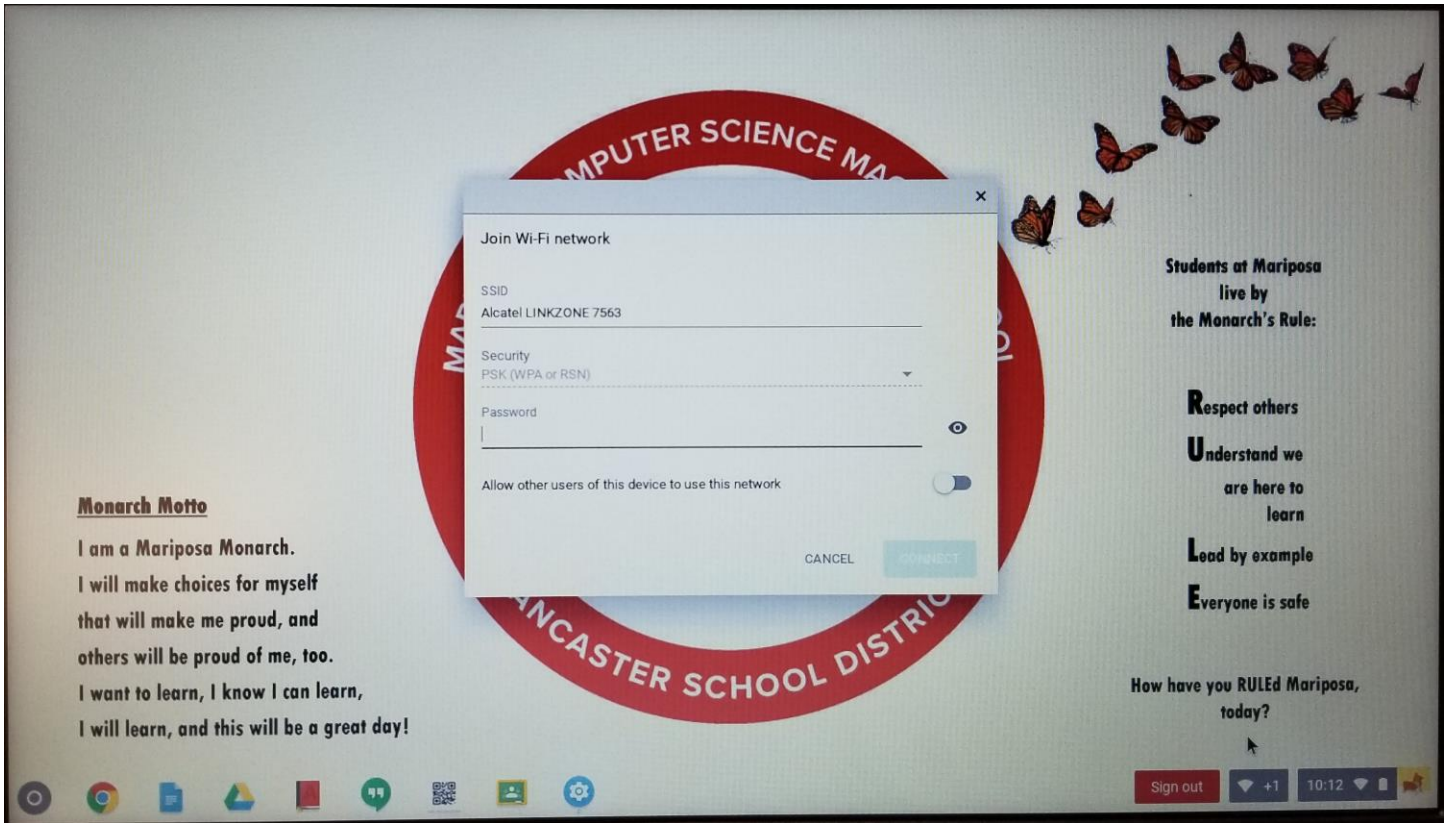

A list of available networks or wifi names should display.

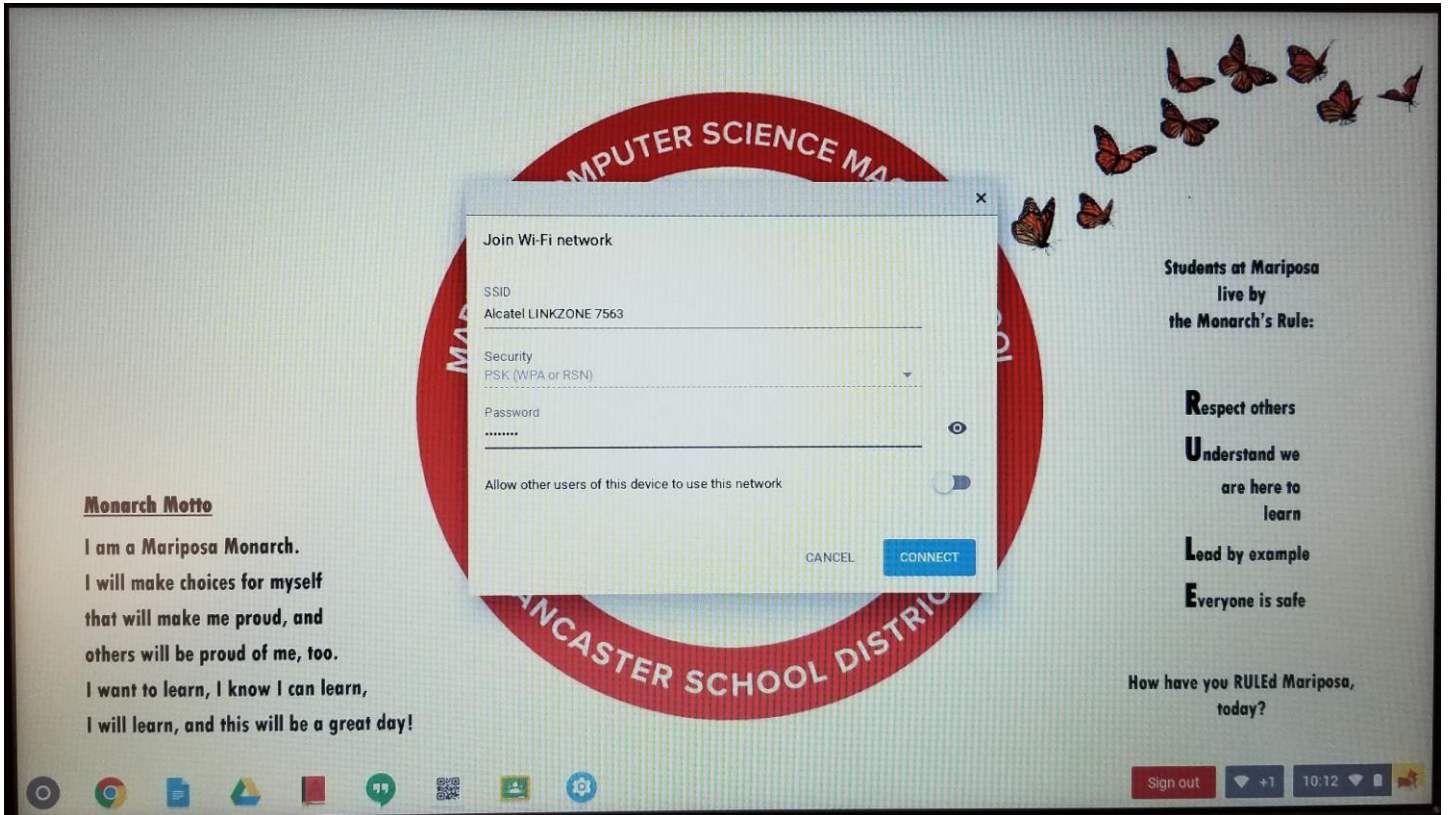

Scroll through the list to the SSID listed for your hotspot or wifi and click on it.

You will be prompted for a password.

Enter the PWD from the back of the hotspot or wifi and click "connect."

Once the window disappears, you should be connected to your hotspot or wifi.

Monarch Motte

I am a Mariposa Monarch.
I will make choices for myself
that will make me proud, and
others will be proud of me, too.
I want to learn, I know I can learn,
I will learn, and this will be a great day!
